Dear Healthcare Provider,

The Wyoming State Board of Pharmacy's WORx program contains data for dispensed controlled substance prescriptions. The goal of the WORx program is to assist practitioners in preventing controlled substance abuse or misuse. Attached for your review is a *patient utilization report*. You or your pharmacy have been identified as prescribing or dispensing controlled substance(s) for this patient.

The Board requests you review your records to determine whether the subject of this correspondence is your patient and if you provided the prescription(s) identified on the attached report. If you determine you did not authorize or dispense the prescription(s) shown on the report, please contact our office immediately. If you did authorize or dispense the prescription(s), please consider addressing any concerns you may identify in the report with your patient as appropriate.

We are aware that some patients have special needs and conditions requiring significant quantities of controlled substances. This correspondence is intended to promote quality care by providing information to practitioners and pharmacists.

It is the Board's experience that providers may be unaware that a patient has received prescriptions for controlled substances from other health care providers. The attached *patient utilization report* is confidential, and should only be used for informational purposes.

If additional information is needed regarding this or your other patients, please log in or create an account at <https://worxpdp.com>. If you have questions, please contact the WORx Coordinator, David Wills, at (307) 634-9636.

Thank You,

David N. Wills, MBA
WORx Coordinator
